

## What to expect when you partner with us

### Questionnaire

Get your ideas & concepts down on paper & start thinking about your project's requirements, metrics, & constraints.

### Functional Design Specification

Together we create a Functional Design Specification (FDS) which defines the agreed scope of work.

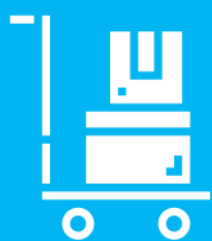

### Concept

We create a concept(s) of the possible solution(s). This may include 3D CAD, conceptual layouts, & equipment specs.

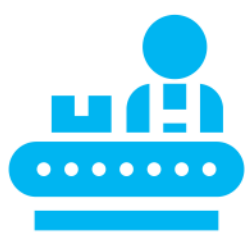

### Development

Critical design sections are prototyped, tested, & validated. The design is finalised. Highrisk items are procured & tested. The FDS is updated with the implemented solution, including hardware, software & interfaces.

### Installation

Any remaining equipment is procured and the project is delivered.

### Testing

All testing as agreed in the FDS is completed. Any required changes are agreed and validated.

### Handover

Ownership of the project is passed to you and the FDS is updated with any final items to reflect the "as built" equipment.
