

Automated Robotic Palletising Solutions

Product: Cobot Palletiser

Model: Ultimate

Type: Dynamic 7th Axis

Market: High throughput manufacturers demanding maximum capabilities

Overview

With the option of two sizes, the Ultimate Cobot Palletiser is ideal for manufacturers looking to push their throughput with multipicks and higher pallet stacks – this cobot palletiser gives you everything you need.

Our cobot systems are programmed using user-friendly software, so after basic training, your operators can adapt and build new palletising patterns without specialist skills. The small footprint and worker-safe design mean it fits easily into tight factory spaces, boosting throughput without interrupting existing workflows.

Key Specifications

Size	Small	Large
Max Payload*	18Kg	27Kg
Max Palletising Pace*	10	10
Max Palletising Height*	3000mm	2750mm

1. *Max Payload: Does not include the weight of the end-effector vacuum gripper
2. *Max Palletising Pace: The actual palletising speed depends on the weight, size, and layout of boxes
3. *Max Palletising Height: The size and layout of boxes may affect the actual palletising height

Product & Service Scope

Hardware & Software

- Cobot
- Gripper
- Lift

Services

- Configuration & installation
- Risk analysis and CE marking of the complete installed cell
- Operator training

Benefits

- High-performance model for large payloads and demanding volumes
- Futureproof design supports evolving product and packaging needs
- Easily handles complex palletising patterns and varied box types
- Works safely near human operators without large guarding systems
- Maximises factory space with a compact, high-capability footprint
- Boosts productivity

Price

- POA – starting from £79,000
